This letter is to confirm that all of MG Chemicals' products comply with The People's Republic of China's Management Methods for Controlling Pollution by Electronic Information Products, Ministry of Information Industry Order #39, commonly referred to as "China RoHS".

None of the products produced by MG Chemicals belong to any of the product categories listed in the draft English Reference Translation of the "Electronic Information Products Classification and Explanations", therefore, none of them are considered "Electronic Information Products," and therefore, there are no products of MG Chemicals that must be marked with pollution control logos.

Some of MG Chemical's products may be used as components for products that may one day be distributed in The People's Republic of China, so MG Chemicals is responsible for disclosing to customers the content level of the six listed hazardous ingredients, so these customers may determine if their final products are compliant with the law or not.

The English translation of the document "Requirements for Concentration Limits for Certain Hazardous Substances in Electronic Information Products" lists the six hazardous substances controlled as "lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyl (PBB), and polybrominated diphenyl ether (PBDE, exclusive of decabromodiphenyl ether), with the possible restrictions (depending on product category) of having not intentionally added any of these ingredients, and the content of each of these substances is less than 0.1% of the final product.

MG Chemicals hereby certifies that none of these substances has ever been intentionally added to any of our products, and all products produced contain and have always contained less than 0.1% of each hazardous substance, and again, no product sold by MG Chemicals is classified as an Electronic Information Product for the purpose of this law; therefore, all products of MG Chemicals are currently compliant with the law referred to as "China RoHS".
